

# AI Empowerment Pulse

CURRENT-WINDOW BRIEF | 24 Aug 2026 - 30 Aug 2026

A concise public brief on what current AI developments indicate for human empowerment - and how the picture changes when article volume is separated from unique real-world events.

## COVERAGE INDEX

**+6.67**

111 AI-relevant articles

## EVENT INDEX

**+4.98**

110 unique AI events

## AMPLIFICATION GAP

**+1.68**

Coverage minus Event

## Four takeaways

### OVERALL DIRECTION

The unique-event signal is close to neutral (+4.98).

### AMPLIFICATION

Article volume makes the public picture more expansion-oriented. Gap: +1.68 points.

### COVERAGE VOLUME

Most coverage units represent distinct developments in this release. Coverage/Event ratio: 1.01.

### NARRATIVE CLIMATE

Descriptive Neutral is the largest article-weighted frame (66.7%).

# Attention versus unique developments

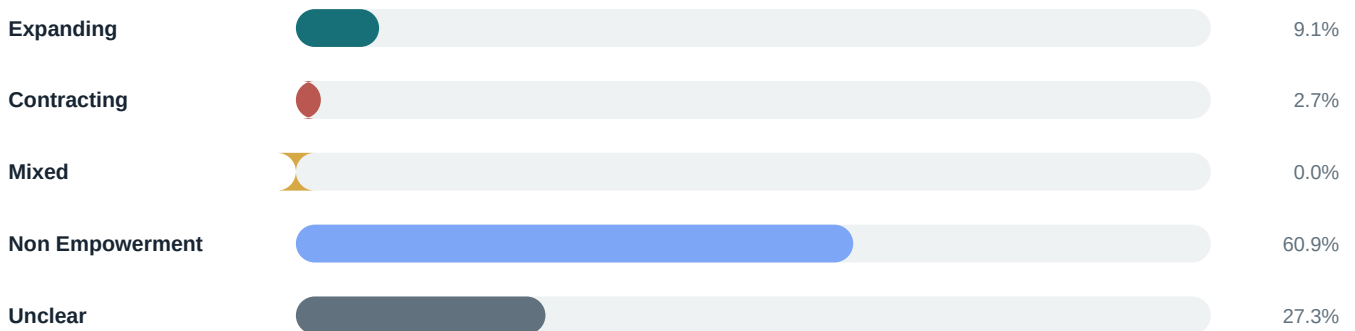

Coverage Lens retains article repetition. Event Lens gives each resolved development one weight. Their difference reveals whether media volume shifts the aggregate direction.

## Narrative climate

## Event Lens empowerment mix

# How to read the signal

|                          |                                                                                                                   |
|--------------------------|-------------------------------------------------------------------------------------------------------------------|
| <b>COVERAGE LENS</b>     | Each observed article receives one weight. Repetition measures attention and framing.                             |
| <b>EVENT LENS</b>        | Each resolved real-world development receives one weight.                                                         |
| <b>UNIT SCORE</b>        | Expanding = +degree/3; contracting = -degree/3; mixed and non-empowerment = 0; unclear is excluded.               |
| <b>AMPLIFICATION GAP</b> | Coverage Empowerment Index minus Event Empowerment Index.                                                         |
| <b>COUNTRY RULE</b>      | Search market is not event country. Country signals are released only when evidence thresholds are met.           |
| <b>HUMAN GOVERNANCE</b>  | Automated coding is versioned and audited. Human review corrects high-risk cases and periodic stratified samples. |

## Evidence examples

### EVENT 1 | 2 SOURCE ARTICLE(S)

Ministry of Industry and Information Technology: Explore new models for cultivating applications of artificial

### EVENT 2 | 1 SOURCE ARTICLE(S)

AI According to MC Solaar

### EVENT 3 | 1 SOURCE ARTICLE(S)

AI Model Choice is now a Mission Advantage: Multiple AI models available in AWS GovCloud (US)
